Subject: F.J. Doyle Salvage Cleanup
Attachments: Potential Truck Routes.jpg

All:

I wanted to pass this map on to you to seek your input on various truck routes based up road conditions and impact on school activities. We plan on working 10 hr days 6 days per week (Monday – Saturday). We have about 6000 cubic yards of material to dispose which will be roughly 300 - 18 wheeler trucks (end dumps). The trucks will come in empty so this should not be a problem and will go out at about 80,000 lbs.

Please give me your feedback on the routes you think would be best for both the city and the school.

Thanks
